

 EAA Young Eagles®

Your guide to the Young Eagles experience

The EAA Young Eagles program was launched in 1992 to give young people ages 8-17 the opportunity to go flying in a general aviation airplane.

After nearly 2 million Young Eagles flights, we've seen a lot of young people gain new motivation, focus, and maturity. For some, aviation becomes a lifelong hobby or career.

After today's flight, we encourage you to explore all the possibilities that aviation has to offer through the Young Eagles Flight Plan program—a series of valuable resources and enriching learning opportunities that can get your child's future off the ground.
